Contents

See the various prop-modules of [action=query](#) to get information from the current version of a page.

There are several ways to specify the text to parse:

1. Specify a page or revision, using \$1page, \$1pageid, or \$1oldid.
2. Specify content explicitly, using \$1text, \$1title, \$1revid, and \$1contentmodel.
3. Specify only a summary to parse. \$1prop should be given an empty value.
